PRODUCT

## ASSEMBLY SYSTEM

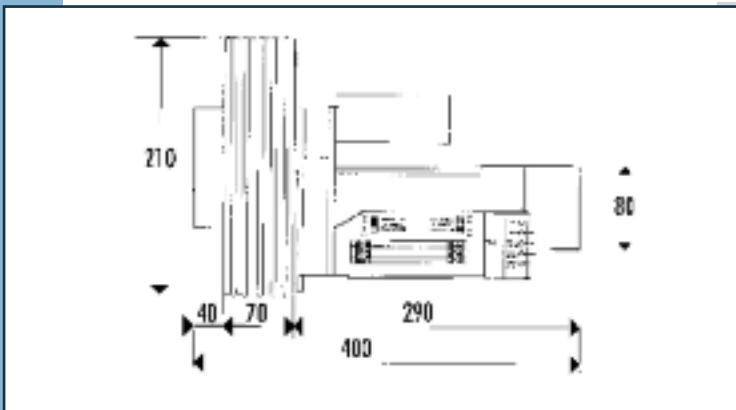

## Balanced roller shutters operator

This operator has been studied to satisfy the use on heavy shutters thanks to a satellite reduction system, which can raise a balanced weight of 150 kg. Versatile use and simple installation are obtained thanks to the doubling of the towing wheel and to standard supplied diam.48mm reduction inner semishells and external adapter from 200 to 220 millimeter. The operator can be installed very quickly and in a safe way thanks to its innovative system of dragging limit switch adjustment.

### TECHNICAL FEATURES

# DEA<sup>®</sup>

### Datas

### WILL

Power supply (V) (50Hz)	230ac
Capacity (W)	630
Speed (Rpm)	8
Torque (Nm)	210
Lifting capacity (Kg)	180
Weight (Kg)	10

### DESCRIPTION

Connecting the operator to a simple control board with a plug-in radio receiver, it is possible to make this system still more practical and safe. One of its main features is the complete absence of internal wirings to be completed during the installation. The operator is standard equipped with an electrobrake driving circuit, and all the parts under tension are shielded with plastic protections.

### ITEMS AND ACCESSORIES

- WILL:** Operator up to 150 kg balanced roller shutter
- WILL/CF:** Operator up to 150 kg balanced roller shutter, built-in electrobrake
- WILL/F:** Complete brake for WILL operator
- WILL/42:** Adaptation shaft  $\varnothing$  42
